PROJECT REPORT

SKYLINE PROPERTY MANAGEMENT

Java Web Application

Presented by: Nishad Shaikh Irfan

Guided by: Project Mentor

Organization: Anvistar ITS Pvt. Ltd.

Project: Skyline CRM

Domain: Java Developer

CERTIFICATE

This is to certify that Nishad Shaikh Irfan has completed the project work titled “Skyline Property Management – Java Web Application” as part of project-based training at Anvistar ITS Pvt. Ltd. in the Java Developer domain. The work covers property, client, employee, enquiry, follow-up, booking and payment management using web technologies, JSP and MySQL.

Project Mentor: _____

Date: _____

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my project mentor and Anvistar ITS Pvt. Ltd. for providing the opportunity to work on the Skyline Property Management project. This training helped me understand the practical use of HTML, CSS, JavaScript, Bootstrap, MySQL and JSP in a Java web-development workflow. I am thankful for the guidance, feedback and practical tasks that helped me improve my programming, database, debugging and problem-solving skills.

10. Future Enhancements
11. Conclusion
12. References
1. COMPANY AND INTERNSHIP OVERVIEW

The internship focused on developing and understanding a property-management workflow covering Properties, Clients, Employees, Enquiries, Follow-ups, Requests, Bookings and Payments. The training followed a progressive path from frontend fundamentals to database-backed JSP modules and authentication.

2. PROJECT INTRODUCTION

Skyline Property Management is a Java web application designed to organize property-related business activities in a structured system. The project connects property information with clients, employees, enquiries, leads, follow-ups, requests, bookings and payment records through a MySQL-backed JSP application.

The project was developed through practical tasks. The first stages focused on responsive web pages, followed by JavaScript interactivity and validation, Bootstrap-based interfaces, MySQL database design, JSP CRUD modules, and finally authentication, sessions, logout and role-based access.

3. PROJECT OBJECTIVES

The main objective is to develop a structured web application for managing property listings and related business activities. The system aims to:

Organize property information.

Manage client and employee records.

Capture enquiries and leads.

Maintain follow-up activities.

Manage property requests and bookings.

Maintain payment records.

Provide authentication and role-based access.

Practice CRUD operations, SQL queries, JOINS, sessions and JSP–MySQL connectivity.

4. TECHNOLOGIES USED

Frontend: HTML, CSS and JavaScript.

UI Framework: Bootstrap.

Database: MySQL.

Server-side Web Technology: JSP.

Core concepts practiced include forms, validation, DOM manipulation, events, CRUD operations, SQL queries, filtering, aggregation, JOINS, sessions and authentication.

5. SYSTEM MODULES

Login & Authentication: Username/password login with role-based access.

Admin Dashboard: Cards, sidebar, navigation and property-management overview.

Client & Employee Management: Add, view, update and delete records.

Property Management: 1-BHK, 2-BHK and 3-BHK property cards with search and filter.

Enquiry & Lead Management: Capture and manage property enquiries and leads.

Follow-up Management: Maintain follow-up activities for enquiries and leads.

Request & Booking Management: Manage property requests and bookings.

Payments: Maintain client, vendor and employee payment records.

Utilities: Petty Cash, Day Book, Notice Board and Import/Export.

6. DEVELOPMENT PROCESS

1. Build property-management UI using HTML forms, tables, divs, rows and columns.
2. Apply CSS selectors, box model, positioning, effects and responsive layouts.
3. Add JavaScript conditions, loops, functions, events and DOM manipulation.
4. Use Bootstrap grid, navigation, buttons, alerts, modals, tables and dashboard components.
5. Design the Skyline Property database and practice SQL CRUD, filtering, aggregation and JOINS.
6. Connect JSP pages with MySQL and process client, booking and property data through request/response.
7. Add authentication, sessions, logout and Admin/Employee role-based login.

8. CHALLENGES FACED

The project involved several practical challenges: understanding the complete property-management flow from UI to database; designing responsive property cards, forms and dashboard components; handling JavaScript search, filters, DOM updates and validation; creating related tables for properties, clients, enquiries, bookings and payments; connecting JSP forms with MySQL records and CRUD operations; implementing authentication, sessions, logout and role-based access; and debugging the application through repeated practice.

9. LEARNING OUTCOMES

The project provided hands-on practice in HTML, CSS, JavaScript and Bootstrap for property-management interfaces. It strengthened understanding of responsive property cards, forms, validation and DOM manipulation. It also provided practical experience with MySQL database creation, CRUD, filtering, aggregation and JOINS. JSP structure, request/response processing, JSP–MySQL connectivity, authentication, sessions, logout and role-based login were practiced as part of the final workflow.

10. FUTURE ENHANCEMENTS

Possible future enhancements include a mobile application for property managers, employees and clients; secure online payment integration; advanced property search based on location, price, BHK, availability and property type; automatic email/SMS notifications; graphical reports and analytics; cloud deployment; enhanced role-based security; and AI-based property recommendations.

11. CONCLUSION

The Skyline Property Management project successfully demonstrates a web-based property-management workflow using Java-related web technologies. The system is designed to manage properties, clients, employees, enquiries, follow-ups, bookings and payments. JSP and MySQL are used for CRUD-based data management, while HTML, CSS, JavaScript and Bootstrap support the user interface. The internship and project work provided practical exposure to programming, database management, debugging and problem solving.
